

## **Paediatrics**

# Self-directed Learning package

To be read in conjunction with: HMO/intern position description Paediatric unit orientation information

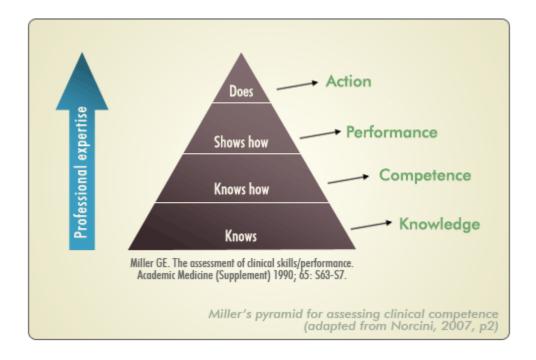

Mamai			
Name:			

#### Self-directed workbook - paediatrics

This self-directed workbook as a guide for you to assess your knowledge and identify your learning needs by completing the workbook.

It is not mandatory, but we would like to continue to use it as it assists with performance appraisals (which is essentially performance coaching), and to provide some more structure and real learning outcomes.

The following diagram highlights the key objectives, with our aim to see more of "does" and "shows how"

#### **BHS Paediatric Expected Learning outcomes**

#### 1. Education - paediatrics

The education series covers the following topics:

- 1. Neonates
  - a. Resuscitation
  - b. Hypoglycaemia
  - c. Jaundice
  - d. Fluid management
  - e. Neonatal sepsis and meningitis
    - i. Recognition/risk factors/organism/mx
  - f. Neonatal seizures recognition, causes and treatment

#### 2. Paediatric

- a. Normal development
- b. Bronchiolitis
- c. Asthma Awareness of statewide/RCH guideline
  - i. Diagnosis mild moderate severe and treat accordingly
- d. Croup
- e. Dehydration e.g gastroenteritis
- f. IV fluids
- g. Sepsis/meningitis
- h. Rashes
- i. Seizures
- j. Analgesia and pain management
- k. Child with a limp
- I. Child protection and Reducing Family Violence
- m. Diabetes
- n. Headache
- o. Allergy/anaphylaxis
- p. Adolescent health eg eating disorders, deliberate self-harm
- q. Discharge planning

The learning resources in this self-directed workbook cover these topics. The learner should complete the self-directed workbook to enhance their own understanding of their learning needs. Every section does not need to be completed. Use it to reinforce areas where your knowledge is strong, or to identify areas that need some work. In many cases this will mean on the job learning, rather than finding information in books.

We suggest that completing this workbook in preparation for paediatric terms is strongly advised. For rotations such as emergency (30% paeds) or surgery it is also strongly encouraged.

#### Formal educational activities occur throughout the week (paediatric terms)

- A regular face to face teaching program is conducted
- Journal club, and M&M sessions; MDT meetings; X-ray meeting; Child protection meeting and monthly Paediatric Clinical meeting
- You will be expected to have completed Resus4kids prior to or in the early part of your rotation and had an assessment of Neonatal resuscitation

•

It is not possible for doctors to attend all sessions due to shift work, duration of rotations and leave etc. therefore we will publish for each topic the PowerPoint presentations and associated resources for people to read.

#### Learning resources available at:

### Paediatric portal - <a href="http://paedsportal.com/">http://paedsportal.com/</a>

http://educationresource.bhs.org.au/paediatric http://educationresource.bhs.org.au/hmo

Further information on topics can be found at your leisure, with the following suggestions designed as a short list

- Internet RCH guidelines, note these can be downloaded to a smartphone as an App exists for both the RCH guidelines and parents information
- BHS education resource site.
- RCH orthopaedic fracture guidelines

#### Self-Directed learning package

Learning Outcomes – treat patient with	Topic/presentation	Workbook case
SICK NEONATES  Awareness of risk of kernicterus and why we treat jaundice; causes and initial investigations (early & late) & use of phototherapy incl awareness of guidelines	Jaundice	A bit yellow
Awareness of risk factors for hypoglycaemia, why early screening & recognition is important; initial management	Hypoglycaemia	Drowsy, poor feed
Neonatal sepsis and meningitis	Infectious diseases	Irritable neonate
Neonatal resuscitation	Attend childbirth	
Seizures		Post ictal
PAEDIATRICS	Development	Failure to thrive?
Normal	Post birth checks	Baby check
Respiratory	Bronchiolitis & Asthma Croup	Infant with wheeze Cough and fever
Gastroenteritis Assessment of dehydration	Dehydration PO/NG/IV fluid therapy	A child with nausea and vomiting
Procedures	Analgesia needed	A post op patient
	Sedation	Bloods and IV needed
Rashes	Not to miss	Fever + non blanching rash
Seizures	Neurological exam	A child presents after first seizure
Limping child	Age related causes	Child won't weight bear
Safe discharge	Discharge planning Child protection Family violence	

Other topics relevant to paediatrics may be covered in the ED workbook E.g. Anaphylaxis, common fractures, and accidental poisonings. Snake bite.

#### Feedback

Complete the self-directed workbook and if it raises questions, ask your supervisor. Add interesting cases to your consults list in BOSSNET, to facilitate discussion. This ensures you do not need to keep lists with patient information, which if taken off site can result in privacy and confidentiality breaches

#### 1. Case: Neonate not right in post-natal ward.

You are called to the special care nursery. A newborn infant was delivered to a 29 yo G3 P2 mother B+ mother at 36 weeks by LUSCS. At delivery, the neo puff was required for transient poor colour and respiratory effort. Appars were 6 and 9 at one and five minutes. Examination normal, except a little jittery.

About ten hours post-delivery, the baby is not feeding well, more jittery.

What are the risk factors for neonatal hypoglycaemia in a clinically well baby?	

What are the causes of hypoglycaemia in unwell/symptomatic babies?

What is the most likely diagnosis, what other symptoms might you look for, and is there any particular differential diagnosis that needs consideration?

The nurse takes a BSL and it reads 1.6mmol/L.

What action will you take, and what medication will you prescribe? Please document it below.

#### Reference

http://www.rch.org.au/rchcpg/hospital clinical guideline index/Neonatal Hypoglycaemia/

There is a <u>BHS guideline</u> – search under Govdoc using hypo or paediatric

#### 2. Neonatal jaundice

You are referred a patient from the ED. He is jaundiced with poor feeding. He is day 4, 3.3kg, born at term to a 35 yo G2P2 woman with gestational diabetes. The pregnancy was otherwise normal, with a normal vaginal delivery. Apgars were 9 and 10 at 1 and 5 minutes. He was discharged at day 2 with mild jaundice as he was feeding well. He did not feed well on day 3, was more yellow, so parents thought today they had better get him reviewed as some lethargy and poor breast feeding.

O/E jaundiced, sunken fontanelle, irritable but generally normal tone and remainder of exam. You review the infant and blood tests were arranged.

How will you decide if something serious is going on? History & Examination-features particularly relevant

#### **Investigations**

Refer to the following BHS/RCH guidelines and Neonatal handbook

- <a href="http://www.rch.org.au/clinicalguide/guideline\_index/Jaundice\_Flowchart/">http://www.rch.org.au/clinicalguide/guideline\_index/Jaundice\_Flowchart/</a>
  <a href="http://www.health.vic.gov.au/neonatalhandbook/conditions/jaundice-in-neonates.htm">http://www.health.vic.gov.au/neonatalhandbook/conditions/jaundice-in-neonates.htm</a>
- BHS guideline

#### When is phototherapy indicated?

#### Reference

http://www.rch.org.au/rchcpg/hospital\_clinical\_guideline\_index/Phototherapy\_for\_neonatal\_jaundic\_e/

https://www.nice.org.uk/guidance/cg98/chapter/recommendations#threshold-table

#### 3. Neonatal sepsis

You are asked to see a neonate

Male, 3450g, born at term normal vaginal delivery to a 19 year old G2P1, all clinical and blood test features of a low risk pregnancy. (GBS negative, no maternal fever) Rupture of membranes occurred 9 hours pre delivery, clear fluid, apgar scores 8 and 10 at 1 and 5 minutes. HR 170 T 37 RR 60 O2 98% on room air. Temp 35.8 Infant appears a little pale and mottled, capillary refill 4 secs. Weak cry and reduced tone.

What other signs and symptoms are worth looking for?
How might you determine the difference between normal neonate and neonatal sepsis?
What is your course of action?
What management is indicated?
Reference  http://www.health.vic.gov.au/neonatalhandbook/infections/sepsis.htm

#### 4. Newborn seizures

You attend a paediatric MET response. The paediatric registrar is at a Caesar, and the consultant is ten minutes away.

A neonate is having a generalized seizure

The neonate was born at term to a 36 year old mother who is B+, normal serology and group B strep negative, usually fit and well and unremarkable pregnancy. Delivery was by LUSCS due to poor progression of labour, Apgar scores were 8 and 10 at 1 and 5 minutes. All went well first 24 hours

On second day neonate has a 90 second generalised seizure. Resolved spontaneously. Oxygen was given and blood glucose was 5

What features on examination are most important?
What is your first line treatment?
What treatment would you initiate after a second seizure?
What investigations?
What are the options for drug administration, and IV access?
What must you not miss?

#### 5. Paediatric respiratory

4 year old female presents with wheeze

She has had a few episodes of wheeze over the last three years, but no firm diagnosis. Family history of asthma, eczema and hay fever. Unremarkable pregnancy and meeting all developmental milestones. Immunisations up to date, no medications or past medical history

Has had coryza and cough over last two days, appears breathless on exertion.

RR 48 HR 160 cap refill 3 secs looks a little tired, O2 99% on room air. Examination reveals generalised wheeze.

How severe is this presentation of acute asthma?

#### What treatment will you initiate?

YEAR 20_			DATE & MONTH -	-					
		ENTER ADMINIS	TRATION TIMES						
Date	Medication	n (Print Generic Name)	Tick if Slow Release		/				
Route	DOSE	Frequency							
Pharmacy/add	itional informati	on							
Indication		Dose Calculation (	e.g. mg/kg per DOSE)			/	/,	/	
Prescriber Sign	nature Pri	int Name	Contact/Pager —	-/	/	/	/	/	
Date	Medication	n (Print Generic Name)	Tick if Slow	1	/	/		/	
Route	DOSE	Frequency	Release						/
Pharmacy/add	itional informati	ion				/			
Indication	e	Dose Calculation (	e.g. mg/kg per DOSE)	-	/	/	/	/	
Prescriber Sign	nature Pr	int Name	Contact/Pager —	+		/	4	/	

What guideline will you use and where will you find it?

**TASK:** Patient fact sheets and asthma action plans.

Please find an example and review it.

#### 6. Paed bronchiolitis vs croup

A 2 year old boy presents with cough The coughing has been worse last night in particular and associated with noisy breathing on inspiration.

Past history is unremarkable, no allergies or medications, has had homeopathic immunisations only.

O/E HR 120 RR 32 O2100% sternal and intercostal recession, tracheal tug

#### Assessment:

What is the likely diagnosis, and what differential diagnoses should you consider?
What physical examination findings might help you make the diagnosis?

What features should you assess for risk of respiratory failure in a child?

Outline your explanation to a parent when you are prescribing prednisolone and discharging a child with croup

#### 7. 2 yo boy with Nausea and vomiting and diarrhea

2 year old boy comes into the emergency department with his mother. She complains that her son hasn't been eating or drinking for the past 2 days after having 6 bouts of diarrhoea and vomiting.

What is the likely diagnosis and differentials for this boy?

What questions would you ask the mum?
What are the key areas to assess in examination?
What do you do if mild to moderate dehydration?
What do you do for severe dehydration?
What advice do you give to the mother about management at home?
What situations do you reduce fluid to 50-60%
What is the management if the child is a neonate?

## Please document an IV fluid order that will last until the 9am review tomorrow morning.

NB should be reviewed when U&E available

#### WEIGHT RECORDED AS 10kg

		Medic	cal Order		
Date	Flask No Flask Vol mL	Type of Fluid Including Strength	Additive(s) Including Dose	Rate: Hr per flask or mL per hour	Medical Officer's Signature
		* 1			

If the patient **weight** is **20kg**: (different case example) how would you alter your order?

		Medic	cal Order		
Date	Flask No Flask Vol mL	Type of Fluid Including Strength	Additive(s) Including Dose	Rate: Hr per flask or mL per hour	Medical Officer's Signature
		- 1			

#### 8. Preparation for a procedure

How will you establish rapport with mum and child?

A child is about to have an IV cannula, to facilitate some sedation for a CT scan of the head.

What are your options or strategies for;
Distraction methods?
Analgesia?
Topical anaesthesia?
Positioning of the patient?
Sedation?
More advanced options could be discussed for bigger procedures
Who can help you?

#### 9. Rash

A four year old boy presents to the ED after becoming suddenly unwell at his kindergarten. He was well in the morning, his siblings have recently had viral upper respiratory tract infections, and shortly after lunch he developed a fever, sore throat and vomiting. This all happened about six hours ago, and now he looks miserable, and complains of sore legs, and cold hands and feet.

He has no rash, no stiff neck or headache.

List the diagnosis/differential diagnoses and key features
What features should you look for on history and examination?
Outline the investigations that should be performed (list them in order of importance, i.e. what is done first etc.)
What action should you take?

You establish IV access, and send off bloods and consider a full septic work up, LP, urine, CXR.

He develops a few pin prick red spots on the abdomen

Further examination reveals a couple of larger red spots, these are non-blanching. Mum thinks it might be chicken pox.

What action will you take now?

- http://www.meningitis.org/assets/x/50631

#### 10. Non accidental injury

A 3 year child presents with a limp and is quite reluctant to walk. The mother denies a history of trauma. In the ED the HMO orders an XR and it demonstrates a healing tibial fracture. They request admission and further assessment.

What features do you consider "red flags" for Non accidental injury (this case and in others)?
What is the procedure for reporting suspected Non accidental injury or children at risk?
Where might you find further assistance or information to help you deal with this issue while you are working here?

#### 11. Seizure

4 year old is brought in by ambulance after experiencing a seizure while at home. Temp 38.9 Pharyngitis and mild otitis media, otherwise full exam normal.

What are the main questions you would like to ask the mother?	What are the ma	in questions	vou would like to	ask the mother?
---	-----------------	--------------	-------------------	-----------------

The same mother comes in a month later with her 8 year old child after she has had a seizure. The child has been previously ill but the mother reports the seizure seemed to be very different from the one her 4 year old had While you are talking to the mother the child has another seizure with classic tonic clonic movements.

What is your initial management?

The seizure is still lasting after 5 minutes. What do you do?

#### APPENDIX - BHS Skills and Procedures Checklist - HMO 2+

#### Introduction

The skills and procedure check list have been developed to help you keep a record of your learning and will be used in your end of term appraisal. Where possible ask a senior doctor to observe you undertaking any of the following procedures or document yourself what you have achieved.

Element	Procedure/skill	Date	Signed
Airway	Airway care with simple adjuncts such as		
	pharyngeal airway		
	Insertion of LMA		
	Simple airway manoeuvres		
	Understand difference- position		
	neonate/child		
Breathing	Bag mask ventilation*		
	Apply oxygen mask		
	Administer medication via a spacer		
	Teach use of spacer		
Circulation	IV access –		
	Heel prick		
	Venepuncture		
	Intraosseous access		
	IV infusion including the prescription of fluids		
	IV infusion of blood & blood products		
Procedures	Perform BLS - neonate and paediatric		
	NG & feeding tube insertion		
	Lumbar Puncture -		
Pain Relief	Preparation and administration of IV		
	medication,		
	Understand performance of distraction &		
	Nitrous oxide		
Paediatrics -	Examine ear, nose, throat		
Febrile child	Obtain a clean catch urine		
Paediatrics –	Asthma education		
breathing	Interpret chest x-ray		
difficulty			
Paediatrics -	Assess hydration		
vomiting	NG & feeding tube insertion		
	IV access		
	IV infusion including the calculation of fluids		
	requirements		

#### **BHS Mini-CEX Assessment OPTIONAL**

#### Introduction

A mini-CEX exercise assessment (mini-CEX) is a 15-20 minute snapshot of doctor-patient interaction observed and assessed by a senior doctor.

#### Instruction

While you are on your paediatric rotation, try to complete 2 mini-CEX assessments from the skills and procedure check list. It is likely that presenting a case to your registrar or consultant will be a practical way to perform this task.

Date:	ractical way to perform this task.	
Clinical Problem:		
Assessment Criteria	Descriptors	Results
1. History taking	<ul> <li>Elicits a history that is relevant, concise and accurate to patient's context and preferences</li> <li>Effectively uses appropriate questions</li> <li>Responds appropriately to verbal and non-verbal cues</li> </ul>	□ Competent □ Not yet competent

## **Appendix - What does the Australian Curriculum Framework mean for junior doctors?**

The learning objectives above will reflect things that your supervisor expects you to have learnt during your term.

The learning objectives above are linked to the Australian Curriculum Framework for junior medical doctors. This is provided below (<a href="http://curriculum.cpmec.org.au/">http://curriculum.cpmec.org.au/</a>), and it is evident that there is a lot of information so we have provided a shorter version here.

We have also highlighted certain elements of the ACF which are particularly important or relevant to a paediatric term.

	Clinical Management	Learning Resources
Patient asse		
suc • <u>Ref</u>	estigations: identifies and provides relevant and cinct information when ordering investigation. Ferrals & consultations: Identifies and provides relevant succinct information	BHS policies, lectures, work book
Safe patient	Care	
dise mai • <u>Infe</u> ant • <u>Me</u> me	olic health: knows pathways for reporting notifiable eases and the conditions. Acts in accordance with the nagement plan for disease outbreak.  ection control: Rationally prescribes  imicrobial/antiviral therapy for common presentations.  edicine safety: Prescribes, calculates and administers all dications safely mindful of their risk profile	BHS policies, lectures, work book, BHS HMO handbook
	mergency Care	
	<ul> <li>Recognises the abnormal physiology and clinical manifestations of critical illness</li> <li>Recognises and effectively assesses acutely ill, deteriorating or dying patients</li> <li>Applies the principles of triage and medical prioritization.</li> </ul>	Lectures, work book, on the floor
• <u>Bas</u>	<ul> <li>Identifies patients requiring immediate resuscitation and when to call for help sic Life Support:</li> </ul>	teaching, BHS or externally conducted courses
	<ul> <li>Implements basic airway management, ventilator and circulatory support.</li> <li>Effectively uses semi-automatic and automatic</li> </ul>	BLS assessment
	defibrillators	ALS assessment
• <u>Adv</u>	<ul><li>vance Life Support:</li><li>Identifies the indications for advanced airway management.</li></ul>	
	<ul> <li>Recognizes malignant arrhythmias, uses resuscitations/drug protocols and manual defibrillation.</li> </ul>	
	<ul> <li>Participates in decision-making about and debriefing after cessations of resuscitation.</li> </ul>
